

For thorough cleaning of glass and film

- Based on ammonium bifluoride
- Produces no vapour
- Simple to use

Glass cleaners

Eco-Forte

Eco-Forte removes deposits such as dust and grime from inside and outside your greenhouse. Eco-Forte produces no vapour and can be used on glass and film, but not on coated glass.

Application

Cleaned and clear glass or film allows more light to penetrate the greenhouse. This light is important for the growth of crops. It is therefore important to clean the glass or film of the greenhouse regularly. Eco-Forte does not produce vapour and can be used on glass and film, but not on coated glass.

Use

The following applies to all our cleaners: after spraying the product, rinse with water within 15 minutes or before it dries. During use wear appropriate personal protection equipment. The cleaners produce a spray when applied. Do not allow any of the cleaning agent or rinse water to end up in a water reservoir or surface water.

Used packaging

You can return Eco-Forte packaging after use in the Netherlands and Belgium. For more information, visit houweling.com/recoservice or ask us about the conditions.
