Insects Roadblock

Foodsafe water-based glue

**Houweling
Insects Roadblock is a
food-safe water-based adhesive.
The glue prevents insects from
climbing up and damaging your
crops. Insects Roadblock is easy
to apply, does not constrict the
stem, and retains its adhesive
power for a long time.**

Houweling Insects Roadblock is
effective against: ants, earwigs, scale
insects, aphids, mealybugs, woodlice,
caterpillars, and other crawling insects.

Prevent feeding damage to fruit and leaves

A common problem in the horticulture sector is the feeding damage caused by climbing insects such as ants, earwigs, scale insects, aphids, mealybugs, woodlice, and caterpillars. The feeding damage they leave on fruits and leaves results in lower production and lower quality. By blocking the path to the crops with Houweling Insects Roadblock, you can prevent feeding damage.

Safe application during food production

Houweling Insects Roadblock is water-based and Food Grade certified. This means the adhesive meets very strict standards and is safe for humans and the environment. Insects Roadblock can be safely applied during food production, ensuring food safety.

Flexible adhesive prevents stem constriction

The adhesive is applied around the trunk of (young) fruit trees to protect the fruits. It is important to create a continuous band to ensure there are no openings through which crawling insects can pass. As the tree grows and the trunk widens, Houweling Insects Roadblock moves with the growth of the trunk. This prevents the trunk from being constricted, ensuring the tree's growth is not hindered.

Easy to apply

Because the glue does not stick during application, Houweling Insects Roadblock can easily be applied using gloves, a brush, sprayer, or paint lance. The glue can be easily applied around the trunk of a tree, a post, or a crop support in the greenhouse, as Insects Roadblock only becomes adhesive after drying.

Long-lasting adhesive strength

This food-safe glue never loses its adhesive power because it does not dry out. The effectiveness of the glue may change due to dust and the amount of insects trapped on it.

Different packaging and product variants

The application method determines which Houweling Insects Roadblock you need. Ask your retailer for the correct packaging:

- Houweling Insects Roadblock Paste – to be applied only with gloves or a brush
- Houweling Insects Roadblock Liquid – to be applied only with a sprayer or paint lance
- Houweling Insects Roadblock Cleaner
